HOW TO USE NATURE'S HEAD® WATERLESS COMPOSTING TOILET

BEFORE USE:

- Ensure you have two (2) gallons of pre-moistened Sphagnum Peat Moss (plain, no manure or other mixes) for the solid waste base. Fill product just under the flat laying agitator (should smell woody/pleasant).
- Store nearby a container with 3 parts water/one part vinegar to clean seat and bowl when necessary, or wet wipes.

TO USE:

- Lift lid and make sure the base is closed (handle up) to urinate into 2.2-gallon liquids container. Keep eye on level to not overflow.
- Push handle down to open base to poo. Close immediately after use.
- Turn agitator at least three times.

EMPTYING LIQUID:

- Release latch on each side of seat.
- Raise seat, cap liquids bottle and remove to empty.
- Rinse with a little water (and vinegar if necessary) before placing back in cradle and store the cap nearby.

EMPTY SOLID WASTE BASE:

- Empty solids base when it feels hard to turn macerator handle.
- Release latch on each side of seat and slide off hinge; set aside.
- Remove liquids bottle from cradle.
- Remove wing nut from L-bracket on each side of the base.
- Either fit a 13-gal garbage bag around base and invert contents into the bag, or carry out to chosen location for disposal.
- Place back into L-brackets and spin wing nuts to tighten. Ensure fully assembled.
- Close lid.

REMEMBER TO:

- Teach your family and friends how to properly use this amazing toilet.
- Review often the Installation/User's Guide Manual that comes with your toilet.
- If you leave for long periods of time, empty/clean liquids bottle.
- Keep watch over the liquids bottle to ensure no overflow. If room is dark, place a flashlight nearby. Some folks mark a line on the bottle to show users when it's time to empty it to avoid overflow.
- Keep the bowl and seat clean with water/vinegar/wipes. Never clean the inside of the solids base even after emptying solids (nature is working there).
- Keep base fan plugged in to run while you're there; unplug when you leave.
- Keep snow or stored items free from the outside vent to ensure proper ventilation.
